## Parameliserk kuner

En paramehisel hure i R' er en funksjon 7: I → R", der I or et intervall, slik at

~(t)= (x,(t), x, (t)..., x, (t)) har houlin ulige homponenter X,1×2,-,×n.

Ofte lönne al reg å luke på I sam hiden og 7 (6) sam parijoum ved liden I.

Sporsmal: Hua lang en en slik hune?

Delev opp i små, vette linjestykher og vegne ut den totale lengden hil
